Hello,

I created VM with cpanel 4 and 5, and after install cpanel (no error) i see apache, cpanel, etc no work.

Have problem in this images or fix?

Thanks.

Hi, you didn't post any details. You should not expect a specific answer with such vague symptoms.

log files?
ubc?
firewall?
what _exactly_ isn't working?

Rick

Hello,

I created 1 VM using template cpanel4 and 5, with 1GB ram garanted and 1.5GB max.

Install cpanel, no error.

After, services no start. I rebooted VM and services no work.

I tested in 2 hardwares, and have this problem.

I tested now using template centos-5-i386-afull ;

What sugestion?

Quote:After, services no start. I rebooted VM and services no work.

this isn't an error message. it sounds like you need to check the logs to gain knowledge of a specific problem.

No one can offer any assistance to reported problems like "it not work"

Rick
