Hii guys

I am using centos 5 template and I have installed extra packages on it. Now i need to duplicate the same template with the newly installed software. How can i re-create or whatever you call it the template again

Thanks

Hi,

May be I've understood your question not quite correctly but you can try this way:

install centos-5 vztpl

<http://forum.openvz.org/index.php?t=msg&th=2512&star t=40&>

then add packages you want to

`/vz/template/centos/[version]/[arch]/config/[sort].list`

and use vzpkgcache utility to create your own template.

Hi guys, after looking deeper in the wiki, I found the solution, it is something like this

http://wiki.openvz.org/Fedora_template_update

thanks
