Hi all!

I tried to install Oracle 10G Express on debian under my VM.  
It requires 1Gb swap

This system does not meet the minimum requirements for swap space. Based on the amount of physical memory available on the system, Oracle Database 10g Express Edition requires 1006 MB of swap space. This system has 0 MB of swap space. Configure more swap space on the system and retry the installation.

But i can't create swap under my VM.

In <http://forum.openvz.org/index.php?t=msg&goto=420> topic somebody told, that "Swap is a non problem, it just complains about it but it does not matter." but i really confused. It doesn't want to install.

Have anybody any useful suggestions?

P.S.

There're good manuals for oracle installing:

[http://www.oracle.com/technology/tech/linux/install/xe-on-ku\\_buntu.html](http://www.oracle.com/technology/tech/linux/install/xe-on-ku_buntu.html)

<http://www.debianhelp.co.uk/oracle.htm>

But there are no description how to override swap requirement.

Hi,

in the openvz wiki, there's an article about install o10g in a VE, may this helps ... (-> [http://wiki.openvz.org/Oracle\\_10g\\_VE](http://wiki.openvz.org/Oracle_10g_VE) )

Hi,

I faced the same problem, I found a solution.

I explain it there :

<http://jortega74.free.fr/serendipity/index.php?/archives/34->

Hope it will help

I fixed it with my hoster, just asked to reconfigure zone and add more memory for 2 hours.  
After that installed package.
