hi

just tried to compile a xen+openvz-patched kernel !

- 1 - copy directory ./xen ./linux-2.6-xen-sparse ./linux-2.6.18-xen from xen3.1 into ./own
- 2 - use patch-ovz028stab053.4-combined.gz on ./linux-2.6.18-xen
- 3 - fix some minor rejects (arch/i386/Kconfig.rej ; include/linux/eventpoll.h.rej; include/linux/skbuff.h.rej; net/core/skbuff.c.rej)
- 4 - make menuconfig (add quota, select xen and xen-pci)
- 5 - make

here the error - any idea why - why the line numbers are wrong in the error statement ?!:

```
-----  
CC      drivers/xen/netback/loopback.o  
drivers/xen/netback/loopback.c:63: error: expected ')' before '->' token  
drivers/xen/netback/loopback.c:63: error: expected ')' before '->' token  
drivers/xen/netback/loopback.c:64: error: expected ';' before 'struct'  
drivers/xen/netback/loopback.c: In function 'loopback_open':  
drivers/xen/netback/loopback.c:70: error: 'struct net_private' has no member named 'stats'
```

... more errors in other functions

here part of the code:

```
-----  
62 struct net_private {  
63     struct net_device *loopback_dev;  
64     struct net_device_stats stats;  
65 };  
66  
67 static int loopback_open(struct net_device *dev)  
68 {  
69     struct net_private *np = netdev_priv(dev);  
70     memset(&np->stats, 0, sizeof(np->stats));  
71     netif_start_queue(dev);  
72     return 0;  
73 }  
-----
```

ciao and tx
