I am using Debian GNU/Linux Lenny with kernel
2.6.18-8.1.14.el5.028stab045.1 (x86_64). The VEs are on an XFS file
system.

When stopping a VE with vzctl stop, the kernel oopsed in
shrink_dcache_for_umount and the box completely hung with this backtrace.

Is this is a known problem?
