I'm trying to rebuild the OpenVZ RHEL5 kernel as is (just experimenting) and I have some problems...

```
~/rpmmacros  
%_topdir /tmp3/ovzkern  
%make make  
%_smp_mflags -j6
```

```
ls /tmp3/ovzkern  
BUILD RPMS SOURCES SPECS SRPMS
```

```
$ rpm -ivh ovzkernel-2.6.18-53.1.4.el5.028stab053.4.src.rpm  
(works fine)  
$ cd /tmp3/ovzkern/SPECS  
$ rpmbuild -ba kernel-ovz.spec
```

Then it barfs on an error about missing kernel-2.6.18-x86_64-xen.config.ovz

So I tried

```
$ rpmbuild -ba kernel-ovz.spec --without xen  
and  
$ rpmbuild -ba kernel-ovz.spec --without xen --target=x86_64
```

It finished successfully, but I only end up with an RPM for the kernel headers...

Any ideas?

Please, fill a BUG about it in bugzilla. We'll fix this and you'll be able to track the process.

Thanks.
