Hi all

Just wondering if there is a way that we can prioritize VEs. In other words, if I am running 4 VEs and one of them is more important than the others in terms of using the resources.

Something like prioritizing the processes in the OS.

Thanks

what kind of resource you want prioritize?
CPU time, memory, disk io, network bandwidth?

Kind of all, what I mean is that certain VPS is more important than other. So, I am looking for prioritizing the whole VPS. For example I am running VPS with the ids 101, 102, 103, 104 VPS 102 is important, so I want to give it the priority of using the resources, more or less like process management in the OS

shuaib85, basically we have 5 types of resources:

---

Memory
CPU time
Disk space
Network bandwidth
IO bandwidth

Each one can be tuned separately. With the following tools:

Memory - beancounters
CPU - fairsched
Disk - quota
Network - traffic shaper
IO - iosched

All of this is described on our wiki page here.
