Here said that OpenVZ has a kind of overlay ( or cow) FS which is called "VSFS", although I have not found documentations about it.  
<http://list.linux-vserver.org/archive/vserver/msg11642.html>

Could you tell me any informationo about this FS?  
Even just URLs to docs would be welcome.

Sorry, it is VZFS. I know Virtuozzo has one, but OpenVZ has it?  
Or I should use UnionFS (or CoW link) as an alternative?

For now, you need to stick with UnionFS...

Thanks,  
Kirill
