Here said that OpenVZ has a kind of overlay (or cow) FS which is called "VSFS", although I have not found documentations about it. http://list.linux-vserver.org/archive/vserver/msg11642.html

Could you tell me any information about this FS? Even just URLs to docs would be welcome.

Sorry, it is VZFS. I know Virtuozzo has one, but OpenVZ has it? Or I should use UnionFS (or CoW link) as an alternative?
