I'm having the following problem when I try to backup one of my VE's. I can run vzdump 111 and it works fine.

[root@host ~]# vzdump --suspend 111
INFO: starting backup for VPS 111 (/vz/private/111)
INFO: starting first sync /vz/private/111 to /vz/dump/tmp27176
INFO: suspend vps
Setting up checkpoint...
Error: No checkpointing support, unable to open /proc/cpt: No such file or directory
ERROR: creating backup for VPS 111 failed (2.52 minutes): command '/usr/sbin/vzctl chkpnt 111 --suspend' failed with exit code 16 at /usr/bin/vzdump line 290.

I think I've already found the answer. I just had to load vzcpt

modprobe vzcpt

what is the best way to do this when the server starts? I'm running CentOS5.

Hm... Actually the openvz startup scripts are supposed to do this job.

If you're sure they do not and you didn't hack them you may fill in the BUG in bugzilla.
