Subject: [PATCH (resend)] Don't create tunnels with '%' in name.  
Posted by [Pavel Emelianov](#) on Wed, 27 Feb 2008 07:44:33 GMT  
[View Forum Message](#) <> [Reply to Message](#)

---

Four tunnel drivers (ip\_gre, ipip, ip6\_tunnel and sit) can receive a pre-defined name for a device from the userspace. Since these drivers call the register\_netdevice() (rtnl\_lock, is held), which does not generate the device's name, this name may contain a '%' character.

Not sure how bad is this to have a device with a '%' in its name, but all the other places either use the register\_netdev(), which call the dev\_alloc\_name(), or explicitly call the dev\_alloc\_name() before registering, i.e. do not allow for such names.

This had to be prior to the commit 34cc7b, but I forgot to number the patches and this one got lost, sorry.

Applied, thanks Pavel.

I've already sent a pull request to Linus an hour ago, so  
this will get in next time around.
