hi,

i tried to generate a checkpoint of a vps.

```
# vzctl chkpnt 103
Setup checkpoint...
Error: No checkpointing support, unable to open /proc/cpt: No such file or directory
```

what have i to do, to generate checkpoints? i found nothing in the kernel. i am using 2.6.16-test0012.1

thx.

cu tb

```
# lsmod
do you have modules vzcpt and vzrst loaded?
```

hej,

no. both are not loaded and also are not existing on my system. how can i creat them? i didn't find

---

anything in the kernel menuconfig...

cu tb.

---

have you compiled the kernel itself?  
check CONFIG\_VZ\_CHECKPOINT option. is it 'm'?

hi,

no because this option isn't available in my .config-file! i checked the patch-file and there i can find it but i don't know why it's not in the .config...

i added it now and try to compile it... no module available... it was not generated what i am doing wrong?

cu tb.

---

```
+config VZ_CHECKPOINT
+   tristate "Checkpointing & restoring Virtual Environments"
+   depends on SOFTWARE_SUSPEND && VE_CALLS
```

check that you enabled these 2 options which are required for checkpointing.

that's it SOFTWARE\_SUSPEND was missing because i deactivated the energy save options  
now i can compile but i cannot load the module vzcpt...

```
# modprobe vzcpt FATAL: Error inserting vzcpt  
(/lib/modules/2.6.16-026test012/kernel/kernel/cpt/vzcpt.ko): Unknown symbol in module, or  
unknown parameter (see dmesg)  
#dmesg  
[...]  
vzcpt: Unknown symbol pmd_huge
```

any ideas? thx.
