Subject: Having trouble mounting in a VE

This should be simple and maybe it is and I'm just thick headed.

In the HE I have a volume mounted

/dev/sdc3 on /nobackup type ext3

I want the same volume to be mounted in a VE under the same name /nobackup so that when I start the VE the volume is mounted there.

I have no concerns about quotas or restrictions. I just want it to work. What do I need to do?

Thanks in advance.

Hi,

Your problem is not how to mount appropriate volume but how to mount it when VE starts, is it?
Have you read about OpenVZ action script in Ovz user's guide (p. 88)?
http://download.openvz.org/doc/OpenVZ-Users-Guide.pdf
