Hi,

Running my Directadmin on openvz. Node runs Centos 4.6 and vps runs centos 5

In Directadmin I get the error

Error with system Quotas
setquota: Cannot get info for user quota file from kernel on /dev/simfs: No such process setquota:
Can't initialize quota on /dev/simfs: No such process setquota: Not all specified mountpoints are
using quota.

I've searched and googled but I'm not succeeding in solving this issue..

Thnx in advance..

Hi,

1. Are you sure that you've set QUOTAUGIDLIMIT parameter inside your VPS to turn on
second-level quota for VPS?
2. What kernel do you use? What ostemplate does your VPS based on?
3. You cannot use second-level quota inside VPS at all, can't you? (edquota,setquota etc)
4. "ls -la /" from inside the VE please.

P.S. Some useful links:
