Subject: Kernel sources needed, SLES 10
Posted by komma on Wed, 26 Mar 2008 16:00:29 GMT

Hello,

I'm using the last SLES-Kernel (2.6.16.46) and until now, it works fine.

But it seems, that the cpt-module isn't available, which is needed for checkpointing / migration:
zcat /proc/config.gz | grep VZ_CHECKPOINT
CONFIG_VZ_CHECKPOINT is not set

So I'd like to build a kernel for my own, but on
http://download.openvz.org/kernel/branches/sles10-2.6.16/2.6 .16.46_027test011-0.12/, there is
no kernel-source-rpm.

Regards,
Gregor

I can only recommend you to switch to RHEL5 kernel (that doesn't mean you have to switch to
RHEL5 as your host system distro -- OpenVZ RHEL5 kernel should work fine on SLES10).

The problem with SLES is it's not easy to get newer kernel sources (src.rpm) from Novell...
