Should these be called "pgpgin" and "pgpgout" for consistency with /proc/vmstat?

Paul

Yes, that is a good name. We also want to instantaneous metrics like page_in_count per second and page_out_count per second to help the administrator monitor what is going on within the tasks in the cgroup w.r.t. memory.

```

Looks simple and nice. Please see Paul's mail on the suggested name change as well
