Hello

I've installed and configured Open VZ by the book, I've made 4 containers. I can access them, and everything, they seem empty to me (they have empty folder root,etc,bin...etc), how do I "install" a Linux into a container? or is the container already a virtual Linux machine, if so, how do I configure it (personalize it)?

thanks for the answers,

matko

Hi,

Could you please show us the exact commands you've used to create container, access it etc. Also "vzlist -a" command after you've created container.

Providing some logs can be really helpful in this case. I.e. the output of

```
vzlist -a
vzctl exec <CTID> ls /
vzctl exec <CTID> ls /bin
```

(here <CTID> is the ID of one of your containers).

Hello

Thanx for the answers, so here is the vzlist -a:

```
VEID;   NPROCS;   STATUS;   IP_ADDR;   HOSTNAME
101 ;    3 ;   running; 199.199.19.1; -
102 ;    3 ;   running; 199.199.19.2; -
```

vzctl exec 101 ls /:

```
bin
boot
dev
etc
home
lib
media
mnt
opt
proc
root
sbin
selinux
srv
sys
tmp
usr
var
```

vzctl exec 101 ls /bin:

```
arch
awk
basename
bash
cat
chgrp
chmod
chown
cp
...etc (shoul I continoue?)
```

That's it...

thanx, bye

matko

In the original post you said

Quote:they seem empty to me (they have empty folder root,etc,bin...etc)

I have asked you to show the output of ls / and ls /bin to see if there are some files in root and bin. Yes there are files in root and bin as you showed.

Now I do not get it. What is your problem?

okey, I didn't know it's suppose to be this way...

then I don't have a problem...

thanx for the time...

bye, matko

Subject: vzyum

hello

I do have a problem. I have CentOS 5.1 installed and a virtual machine CentOS 4 minimal.

I can't use the vzyum?

any ideas why? Is it the CentOS 5.1 fault or something wrong with virtual CentOS 4?

thanx, bye, matko
