Hi,

When I want to set cpuunits over 500000, I have an error. More over, vzcpuchcheck returns an error when cpuunits is too high.

What is the problem ?

```
# vzctl set 183012 --cpuunits 500000 --save
```

```
Setting CPU units: 500000
```

```
Saved parameters for VE 183012
```

```
# vzcpuchcheck
```

```
ERROR: VE0 CPU units not set, or set too high!
```

```
Probably you have not started /etc/init.d/vz
```

```
# vzctl set 183012 --cpuunits 500001 --save
```

```
Bad parameter for --cpuunits: 500001
```

```
# vzcpuchcheck
```

```
ERROR: VE0 CPU units not set, or set too high!
```

```
Probably you have not started /etc/init.d/vz
```

```
# vzctl set 183012 --cpuunits 200000 --save
```

```
Setting CPU units: 200000
```

```
Saved parameters for VE 183012
```

```
# vzcpuchcheck
```

```
Current CPU utilization: 300000
```

```
Power of the node: 1064080
```

My VE0 CPU units : VE0CPUUNITS=50000

My configuration :

- DELL PowerEdge 2950 (bi intel quad core)
  - Debian Etch 64 bits
  - Kernel 2.6.18-fza-028stab053.5-amd64 #1 SMP Sat Mar 1 19:50:43 UTC 2008 x86\_64
  - GNU/Linux (kernel from openvz)
  - vzctl 3.0.22-1ds01
  - vzdum 1.0-2
  - vzprocps 2.0.11-1ds02
  - vzquota 3.0.11-1ds01
-

Hi,

It's a little bit misleading message. You'd better understand it like "Warning: hardware node is overcommitted". 500000 is too big value. Please decrease it!

Have you read "Managing CPU share" chapter from OpenVZ user's guide (p. 53)

<http://download.openvz.org/doc/OpenVZ-Users-Guide.pdf>

Hi, Maratrus,

Thanks for your quickly response.

I have read the documentation of OpenVZ, and of course CPU sharing.

But the Power of the node is 1064080 and when I want to put cputunits at 500000, this is under 1064080 !

Hi,

It's incorrect work of vzcpuchcheck/vzctl utilities.

You may fill the bug.

<http://bugzilla.openvz.org/>

But let me explain the situation and suggest you the workaround:

a) 500000 - is the maximal value of cputunits you can use. That's why you cannot set 500001 cputunits:

Quote:Bad parameter for --cpuunits: 500001

b) But cputunits are relative values. So if you have only one VE instead of VE0CPUUNITS=50000 and YOUR\_VE\_CPUUNITS=500000 you can set VE0CPUUNITS=5000 and YOUR\_VE\_CPUUNITS=50000 because  $50000/500000 = 5000/50000$ .

But, be sure that you've set sufficient value of cputunits for your HN.

P.S. How many CPUs have you got?

I have 2 cpus with 4 cores per cpu : 8 cpus.

I will have more than one VE (one big VE, the others will be little), but CPUUNITS=500000 will be enough.

I will open a bug for vzcpuchcheck and for this "mysterious" limit of 500000.

Thans a lot.
