Hi all!

Have template fedora-8-i386-minimal.tar.gz

inside vps make command:

```
[root@mars /]# sudo -u ftp ls /  
sudo: Error dropping capabilities, aborting  
: Operation not permitted
```

```
tail /var/log/secure  
sudo: root : TTY=pts/1 ; PWD=/ ; USER=ftp ; COMMAND=/bin/ls /
```

Please help!

attach strace log

On host machine this commamd look like:

```
[root@host /]# sudo -u ftp ls /  
audit_log_user_command(): Connection refused
```

bin dev home lib media mnt opt root selinux sys usr vz
boot etc lost+found misc net proc sbin srv tmp var

Did you ever find a resolution to this problem?

I'm getting the same error with *any* "sudo" command for things like:
/bin/ls
/usr/bin/whoami

```
sudo -u MYUSERNAME /usr/bin/whoami
sudo: Error dropping capabilities, aborting
: Operation not permitted
```

```
/var/log/secure
Mar 19 17:42:02 MYHOSTNAME sudo: MYUSER : TTY=ttyp0 ; PWD=/home/MYUSER ;
USER=MYUSER ; COMMAND=/usr/bin/whoami
```

Hello,

could you please try the latest RHEL5 based kernel
<http://download.openvz.org/kernel/branches/rhel5-2.6.18/current/>

maratus,

I have the latest RHEL5 Kernel supporting OpenVZ (2.6.18-92.1.18.el5.028stab060.2) and even at the host level I get this message "audit_log_user_command(): Connection refused". It seems the only way to remove the audit message is to compile the audit option into the kernel. Apparently, both RedHat and Fedora have this option enabled in the kernel. I'm assuming that if you enable this option in the OpenVZ kernel the problem will be solved.

For now I just live with the annoying message "audit_log_user_command(): Connection refused"
