Subject: [PATCH 0/3 net-2.6.26] Compilation fixes.  
Posted by [den](#) on Mon, 31 Mar 2008 15:46:01 GMT  
[View Forum Message](#) <> [Reply to Message](#)

---

Hello, Dave!

Recently I have seen several issues post to the netdev@ blaming inclusion of the net\_namespace.h from seq\_file. This set fixes this problem after two small cleanups.

Regards,  
Den

All applied, thanks Denis.

I'll push to net-2.6.26 after some build sanity checks.

Dave, could you pls consider this addition. This should fix problem reported by the Kamallesh Babulal <[kamallesh@linux.vnet.ibm.com](mailto:kamallesh@linux.vnet.ibm.com)> recently.

[NETNS]: Declare init\_net even without CONFIG\_NET defined.

This seems bogus but there is no other way for now. There are several places when networking headers are included even without CONFIG\_NET and the possibility of the similar reports in the nearest future is great.

Then this invalidates enourmous amounts of CONFIG\_NET tests  
we've put into the headers over the past few days.

All of them were explicitly to avoid having to provide the  
init\_net symbol when CONFIG\_NET is not set.

OK. do you suggest to insert another CONFIG\_NET check into if\_pppox header or separate fs/compat\_ioctl.c into two files:

- for net ioctls

- for the rest?

It's probably better to go your route. That is, unprotect  
the init\_net extern, and remove the CONFIG\_NET's we added  
which are no longer necessary.

Could you do such a patch set? Thanks.

pls consider this. I have found only 3 commits related

[NETNS]: Declare `init_net` even without `CONFIG_NET` defined.

This does not look good, but there is no other choice. The compilation without `CONFIG_NET` is broken and can not be fixed with ease.

After that there is no need for the following commits:

1567ca7eec7664b8be3b07755ac59dc1b1ec76cb

3edf8fa5ccf10688a9280b5cbca8ed3947c42866

2d38f9a4f8d2ebdc799f03eecf82345825495711

Revert them.
