I know its very silly, but I cant setup disk quotas inside ve. I'm using this manual - <http://www.debian-administration.org/articles/47> - and I stop on adding 'usrquota' in fstab. I've tried to add it into mtab, but in seems to be overwritten on ve startup. Host system in debian etch, template debian-4.0-minimal. What should I do?

You can find it in OpenVZ Users Guide, "Turning On and Off Second-Level Quotas for Virtual Private Server", page 51.
