i have my server crashed : in the consoel i see :

BUG: NMI Watchdog detected LOCKUP on CPU0, eip c017c838

my kernel is 2.6.18-ovz028stab021.1-enterprise ...

is hardware problem or kernel problem ?

thanks

Hello,

do you know the way to reproduce this issue?
Could you please show us the full call trace of this BUG?

First, your kernel is way to old -- please update to latest rhel5-based kernel from openvz.

Second, if you will be able to reproduce the issue on the new kernel -- please file a bug to
http://bugzilla.openvz.org/

vz5 kernel: console shuts up ...
Read from remote host vz5: Connection reset by peer

i have changed the RAM and CPU , if it crashed again , i repost a new message on this thread ....

i recomplie a new kernel with kernel 2.6.18 and patch-ovz028stab053.5-combined.gz ... i have
the same error ...

best regards

Hello,

Quote:i have changed the RAM and CPU , if it crashed again , i repost a new message on this thread ....

i recomplie a new kernel with kernel 2.6.18 and patch-ovz028stab053.5-combined.gz ... i have the same error ...

Sorry, but I didn't catch you. Did you get the same error after you'd changed RAM and CPU of you got this error with old CPU and RAM. Please fill the bug in openvz bugzilla if this BUG is persistent.
