[View Forum Message](#) <> [Reply to Message](#)

Hello,

I compiled an openvz kernel from this git repository:

<http://git.openvz.org/?p=ubuntu-hardy-openvz;a=summary>

Then I tried using multiple templates (different versions of ubuntu and debian), but I always have the same problem. I suspect it's related to config files not being overwritten.

Here's an example:

```
$ sudo vzctl create 101 --ostemplate ubuntu-8.04-amd64-minimal
```

```
Creating VE private area (ubuntu-8.04-amd64-minimal)
```

```
Performing postcreate actions
```

```
VE private area was created
```

```
$ sudo vzctl set 101 --hostname hardy --save
```

```
Saved parameters for VE 101
```

```
$ sudo vzctl set 101 --ipadd 192.168.2.1 --save
```

```
Saved parameters for VE 101
```

```
$ sudo vzctl set 101 --nameserver 192.168.1.1 --save
```

```
Saved parameters for VE 101
```

```
$ sudo vzctl start 101
```

```
Starting VE ...
```

```
VE is mounted
```

```
Adding IP address(es): 192.168.2.1
```

```
cp: skipping file `/etc/network/interfaces', as it was replaced while being copied
```

```
Setting CPU units: 1000
```

```
Configure meminfo: 65536
```

```
Set hostname: hardy
```

```
ERROR: Can't copy file /etc/hosts
```

```
/bin/cp: skipping file `/etc/hosts', as it was replaced while being copied
```

```
VE start in progress...
```

Notice the warnings of files being skipped with 'cp'.

Here's some info output:

```
$ sudo vzctl enter 101
```

```
entered into VE 101
```

```
root@localhost:/# ifconfig
```

```
root@localhost:/# ifconfig -a
lo      Link encap:Local Loopback
        LOOPBACK MTU:16436 Metric:1
        RX packets:0 errors:0 dropped:0 overruns:0 frame:0
        TX packets:0 errors:0 dropped:0 overruns:0 carrier:0
        collisions:0 txqueuelen:0
        RX bytes:0 (0.0 B) TX bytes:0 (0.0 B)

venet0  Link encap:UNSPEC HWaddr 00-00-00-00-00-00-00-00-00-00-00-00- 00-00
        BROADCAST POINTOPOINT NOARP MTU:1500 Metric:1
        RX packets:0 errors:0 dropped:0 overruns:0 frame:0
        TX packets:0 errors:0 dropped:0 overruns:0 carrier:0
        collisions:0 txqueuelen:0
        RX bytes:0 (0.0 B) TX bytes:0 (0.0 B)
```

```
root@localhost:/# ip r l
```

```
root@localhost:/# ip rule list
0: from all lookup local
32766: from all lookup main
32767: from all lookup default
```

```
root@localhost:/# cat /etc/network/interfaces
auto venet0:0
iface venet0:0 inet static
    address 192.168.2.1
    netmask 255.255.255.255
    broadcast 0.0.0.0
```

```
root@localhost:/# invoke-rc.d networking restart
* Reconfiguring network interfaces...
SIOCSIFFLAGS: Cannot assign requested address
Failed to bring up venet0:0.
```

Now the weird thing for me is that if I append this to /etc/network/interfaces and restart the network script, everything works fine. Until the VE is restarted, that is.

```
iface lo inet loopback
auto venet0 lo
iface venet0 inet static
    address 127.0.0.1
    netmask 255.255.255.255
    broadcast 0.0.0.0
    up route add -net 191.255.255.1 netmask 255.255.255.255 dev venet0
    up route add default gw 191.255.255.1
```

Any idea of what I could be missing? I saw a past thread suggesting changing the 'cp' flags from '-fp' to just '-f' in the vz scripts, but that unfortunately didn't do the trick.

Thank you.

PS: I also tried assigning different IP addresses to the VE, to no avail.

Thorsten, I have version 3.0.22.

```
$ vzctl --version  
vzctl version 3.0.22
```

Thanks.

Hi,

This seems to be a strange "/bin/cp" problem. This is what I did to fix it:

```
$ cp /etc/vz/dists/scripts/debian-add_ip.sh /etc/vz/dists/scripts/ubuntu-add_ip.sh  
$ vim /etc/vz/dists/scripts/ubuntu-add_ip.sh
```

And replace the cp line:

```
# cp -f ${CFGFILE} ${CFGFILE}.bak
```

with this:

```
[ -e ${CFGFILE}.bak ] && rm ${CFGFILE}.bak  
cat ${CFGFILE} >${CFGFILE}.bak
```

I modified the /etc/vz/dists/ubuntu.conf file too:

```
$ vim /etc/vz/dists/ubuntu.conf
```

```
ADD_IP=ubuntu-add_ip.sh
```

The problem still exists with the set hostname which is being set by a function in the function.sh, but I can live without that for now. Anyway this is just a temporary workaround and I'm going to report this bug in launchpad.

Anybody has an idea what is this bug with the cp command?

Searching the "as it was replaced while being copied" there are thousands of hits pointing to some sort of bug in cp with inodes.

Cheers,
Karoly

Hello again,

Could the patched kernel be the source of this bug? Or something with the hardy-kernel?

I'd be willing to take this further if someone was willing to point out where to start.

Thanks,
Karoly

Hi,

1. Could you please try another kernel?
2. Does "cp" utility work in the common situation? Are you able to use it?

In the VE, cp fails with the same error message whenever I try to overwrite any file. Same thing with mv.

But in the host, cp works normally. At first we suspected a bug in the coreutils package provided by Ubuntu, but I tested a different version of cp and the problem persists.

Perhaps we could try a Debian kernel with openvz.

Hi,

It appears to be the kernel, after all. I just installed a Debian kernel here and that problem disappears. I followed this wiki entry:

http://wiki.openvz.org/Installation_on_Debian

The version I have is:

Linux eclipse 2.6.18-fza-028stab053.5-amd64 #1 SMP Sat Mar 1 19:50:43 UTC 2008 x86_64
GNU/Linux

Now, how do we narrow down the problem in the Ubuntu kernel? Karoly suggested that it could be the way Openvz handles inodes. Is there a specific place I should look for?

Thanks.

this should fix it.

put attach into debian/binary-custom.d/openvz/patchset/ and rebuild kernel

koct9i,

Yes, that fixes the problem. I recompiled the kernel with that patch and now the network works (as well as cp and mv).

Is this patch uploaded to the git repositories?

Thank you so much.

Thank you for the patch.

I compiled a new kernel with the patch and the problem does not show up. cp and mv works as expected.

Thanks again,
Karoly

I'm having a similar problem with OpenVZ on Hardy. Recompiling the kernel is not a viable option. Is it possible for someone to release a kernel that will work? Perhaps put it in backports? Another fellow suggested that this is a large black eye for OpenVZ and I concur. Ubuntu is a large distro and when people try to use OpenVZ and fail, they're not going to come back to it and they'll badmouth it.

That's not a good thing, in my opinion. I believe someone needs to either pull openvz from Ubuntu or fix it to avoid some awful publicity.

Jim.

Hi Jim,

Have you tried the kernel that's in 'proposed'? That's what I have been using and have had no problems.

I'd suggest you follow this bug report:
<https://bugs.launchpad.net/bugs/210672>

Paulo

Hi Jim,

Upgrade to the latest version of Ubuntu Kernel. At this moment it is: linux-image-2.6.24-19-openvz and that is going to fix this problem as well as many others. This is a very solid kernel, I and others have been using it on several production machines without any problem.

Cheers,
Karloly
