I'm trying to setup a bridge interface, as per the wiki,
http://wiki.openvz.org/VEs_in_different_subnets#.283.29_Putt ing_VEs_to_different_subnetworks

but I don't have brctl on the server:

[root@server ~]# locate brctl

Where do I download it from? I don't see it on the wiki either

Thanx, but where do I get the bridge-utils? I don't see it on the downloads page,
http://download.openvz.org/ (neither in utils, templates, or contribs)

Use the favourite distro archive base.

Which distro is used in the container ?

ok, I think I understand what you're saying, but I don't see a CentOS archive on the downloads, so is it somewhere else?

at download.openvz.org only relevant OpenVZ programs and Kernels not other programs like brigde-utils or others, use the offical centos (mirror) download sites!

ok, so by installing bridge-utils from the centos repository I get brctl ?

Thanx for the info. Can someone please update the wiki, saying that bridge-utils needs to be installed first?
