I'm new to openvz so I may be missing something blatantly obvious. I searched the forums extensively and could not find the solution.

My problem is when running the command;

```
vzctl --verbose mount 1000
```

I get the error;

```
Running: /usr/sbin/vzquota show 1000
```

```
Running: /usr/sbin/vzquota on 1000 -r 0 -b 1048576 -B 1153434 -i 200000 -l 220000 -e 0 -n 0 -s 0
```

```
Mounting root: /vz/root/1000 /vz/private/1000
```

```
Can't mount: /vz/root/1000 /vz/private/1000: No such device
```

```
Running: /usr/sbin/vzquota off 1000
```

I am using versions;

```
kernel version 2.6.16-026test012
```

```
vzctl version 3.0.0-8
```

```
vzquota version 2.5.0
```

Any help is greatly appreciated!

I expect, that simfs module isn't loaded.

Please, do

```
modprobe simfs
```

That fixed it! I knew it was something incredibly simple. Thanks for the help!
