Hi

When I try to start vps this message appears;

```
Starting VPS ...
vzquota : (warning) Quota is running for id 960 already
VPS is mounted
Adding IP address(es): 77.245.149.251
bash: line 327: 28162 Illegal instruction     grep -e "\\<${ip}\\>" ${CFGFILE}.bak >/dev/null 2>&1
bash: line 302: 28166 Done                    echo "${IFNUMLIST}"
    28167 Illegal instruction     | grep -q -E "^${IFNUM}$" 2>/dev/null
bash: line 314: 28168 Segmentation fault      mv -f ${CFGFILE}.bak ${CFGFILE}
Setting CPU units: 1000
Set hostname: anitur.trdns.com
bash: line 236: 28171 Segmentation fault      grep -q -E "[[:space:]]${val}" ${cfgfile} 2>/dev/null
bash: line 236: 28172 Done                    echo "${val}"
    28173 Segmentation fault      | grep "\." >/dev/null 2>&1
bash: line 88: 28174 Segmentation fault      grep -E "^\<$name\>" $file >/dev/null 2>&1
 ERROR: Can't change file /etc/resolv.conf
bash: line 235: 28179 Segmentation fault      mv -f ${cfgfile}.$$ ${cfgfile}
File resolv.conf was modified
VPS start in progress...
```

How can i solve this problem,beacuse I can't enter to ve.

Hello,

Please tell us the exact kernel you use, version of vzctl, what ostemplate do you use and where have you got it?

1. uname -a
2. vzctl --version
3. What OS template, where have you got it?

P.S. And also please try to drop VE's quota
- vzctl stop 960 (vzctl umount 960)
- vzquota off 960
- vzquota drop 960

Thank You!

this kernel currently running
2.6.18-openvz-12-1etch1-686 (debian etch)

vzctl version is 3.0.11

I tried to drop quota for 960 veid and vzctl start is failed.Same error.

```
bash: line 327: 17453 Segmentation fault      grep -e "\\<${ip}\\>" ${CFGFILE}.bak >/dev/null 2>&1
bash: line 302: 17457 Done                    echo "${IFNUMLIST}"
    17458 Segmentation fault      | grep -q -E "^${IFNUM}$" 2>/dev/null
bash: line 314: 17459 Segmentation fault      mv -f ${CFGFILE}.bak ${CFGFILE}
Setting CPU units: 1000
Set hostname: anitur.trdns.com
bash: line 236: 17462 Segmentation fault      grep -q -E "[[:space:]]${val}" ${cfgfile} 2>/dev/null
bash: line 236: 17463 Done                    echo "${val}"
    17464 Segmentation fault      | grep "\." >/dev/null 2>&1
bash: line 88: 17465 Segmentation fault      grep -E "^\<$name\>" $file >/dev/null 2>&1
 ERROR: Can't change file /etc/resolv.conf
bash: line 235: 17470 Segmentation fault      mv -f ${cfgfile}.$$ ${cfgfile}
File resolv.conf was modified
VPS start in progress...
```

Hi,

But you didn't answer the following question
-What OS template do you use (the exact version); where have you got it?

As far as I understand your HN has arch. i686.
vzctl 3.0.11 is too old. If it is possible update vzctl please.

sorry

debian-4.0-i386-minimal.tar.gz

it's downloaded from http://download.openvz.org/contrib/template/precreated/

but isnt there now (??)

what is your suggestion?

+ addionly there is a config named vps.basic in /etc/vz/960.conf

Hi,

could possibly create another VE from scratch based on debian-4.0-i386-minimal.tar.gz add an ip to it and try to start it?

(vzctl create VE_ID --ostemplate debian-4.0-i386-minimal; vzctl set VE_ID --ipadd x.x.x.x --save; vzctl set VE_ID --nameserver x.x.x.x --save; vzctl start VE_ID).

1. There is debian-4.0-i386-minimal.tar.gz OS template here http://download.openvz.org/template/precreated/. Please try it.

2. Please show /proc/user_beancounters output.

3. Please check the packages md5's that contains "grep","mv" binaries. ("rpm" has -V option

"dpkg" should has something similar).

4. Please provide us with the output of the following commands:

-vzctl create VE_ID --ostemplate debian-4.0-i386-minimal
-vzctl set VE_ID --ipadd x.x.x.x --save
-vzctl set VE_ID --nameserver x.x.x.x --save
-vzctl start VE_ID
- vzctl enter VE_ID
