We are facing lot of problem with openvz install. Sometimes its kernel panic sometimes server just goes down.

Kernel panic is more likely a hardware issue or operating system? Is there any tool to diagnose the hardware like motherboard, ram and hard disk?

Thanks

Why don't you check wiki before asking questions?

http://wiki.openvz.org/Hardware_testing

Tested memtest and no error. Still problem with kernel panic.

Thats why wanna ask if there any total diagnose tool which can scan everything in server like mobo, hdd, ram etc

Thanks
