The quota inside the vps is different from the quota defined in the vpsid.conf

vps conf file shows

DISKSPACE="61440000:61440000"
DISKINODES="30720000:30720000"
QUOTATIME="0"

But inside vps shows

```
 df
Filesystem         1K-blocks     Used Available Use% Mounted on
/dev/simfs          57471844  38525324   3439064  92% /
/tmp                57471844  38525324   3439064  92% /var/tmp
```

Thanks

Is the filesystem that /vz is mounted on nearly full?

Not really.

Thanks

You have configured this VE with a ~60GB diskspace limit, but the container only shows around 36GB available, and around 3GB free.

This is most likely caused by your /vz filesystem only having 36GB free. Can you verify whether

this is the case?

Your VE cannot show more disk available than is present on your host node.
