Subject: Quota problem in cpanel vps
Posted by whatever on Thu, 01 May 2008 10:08:48 GMT

We have a vps running cpanel. everything was working fine but suddenly some accounts start missing. But now when we run the fixquotas in cpanel it gives error

===============================

It seems your server do not have quota support enabled to enable quota on your server as shown here:

edquota: Cannot get info for user quota file from kernel on /dev/simfs: No such process

edquota: Can't initialize quota on /dev/simfs: No such process
 No filesystems with quota detected.

=================================
We are running the latest enterprise kernel.

Any idea why it's giving error of quota suppport enable error.

Thanks
