Hi,

the backup for this VPS was running ok till a few days back. The cron job now have this error

```
ERROR: creating backup for VPS XXX failed (XXX.XX minutes): command '(cd /var/lib/vz/private/103; find . '(' -type 's' -prune ')' -o '(' -not -type d -regex './var/log/.+' ')' -o '(' -regex './tmp/.+' -prune ')' -o '(' -regex './var/tmp/.+' -prune ')' -o '(' -regex './var/run/.+pid' -prune ')' -o -print0|tar cpf /var/lib/vz/dump/vzdump-XXX.tar --totals --numeric-owner --no-recursion --ignore-failed-read --null -T -)' failed with exit code 1 at /usr/bin/vzdump line 290.
```

the error happens intermittently, some day the vzdump completed withno error.

nothing informative in the dump log. Any idea how I should go about debugging this?

thanks

/shaoming
