
Subject: Could not compile a package against the ovz kernel!?

I am trying to rpmbuild zaptel and other asterisk-related files against the ovzkernel-2.6.18-53.1.13.el5.028stab053.10. I installed ovzkernel-devel too.

Still while I try to build do a

```
#rpmbuild /usr/src/redhat/SPECS/zaptel.spec
```

I keep on getting an error message:

```
# rpmbuild -bb zaptel.spec
```

error: Failed build dependencies:

kernel-devel = 2.6.18-53.1.13.el5.028stab053.10 is needed by zaptel-1.4.9.2.xpp.r5517-3.i386

zaptel.spec is attached for your perusal.

How can I compile this package from SRPMS against ovz-kernel specified above in centos5.1 VE? Any pointers? Thanks in advance!

Could you please show us the output of
rpm -q --provides ovzkernel-devel

```
# rpm -q --provides ovzkernel-devel
```

```
kernel-devel-i686 = 2.6.18-53.1.13.el5.028stab053.10
```

```
ovzkernel-devel = 2.6.18-53.1.13.el5.028stab053.10
```

BTW, let me inform you that I also did:

yum install kernel-devel

But it installed kernel-devel.i686 0:2.6.18-53.1.14.el5 but the dependency error still persists to kernel-devel-2.6.18-53.1.13.el5.028stab053.10.

Is there any kernel-devel-2.6.18-53.1.13.el5.028stab053.10?

Now I see what the problem is:

our ovzkernel-devel provides "kernel-devel-i686 = 2.6.18-53.1.13.el5.028stab053.10" while it should provide "kernel-devel = 2.6.18-53.1.13.el5.028stab053.10" (i.e. no -i686 suffix).

I have filed a bug for this, see <http://bugzilla.openvz.org/884>. Hope we will fix it soon (i.e. in the next kernel release).

For now, please use --nodeps flag to rpmbuild command.

Kir:

Thanks for the bug reporting.

And thanks for your suggestion to use --nodeps flag. With that, I landed at an error:

```
Building modules, stage 2.

```

RPM build errors:

Bad exit status from /var/tmp/rpm-tmp.25892 (%build)

Is it something to do with kernel source?

The last question is more related to Zaptel I guess -- please ask Zaptel guys.

Kir:

What is the timeline that you are to release a new kernel for ovz? Any specific date? Thanks!
