I am following the wiki page

http://wiki.openvz.org/Setting_up_an_iptables_firewall

When i get to the script to set up the HN-based firewall i am always getting this error when i start the firewall service

```
Firewall: Purging and allowing all traffic          [ OK ]  
Firewall: Setting default policies to DROP          [ OK ]  
Firewall: Allowing access to HN  
port 53iptables v1.3.5: Unknown arg '--destination-ports'  
Try `iptables -h' or 'iptables --help' for more information.  
/etc/init.d/firewall: line 46: 53: command not found  
iptables v1.3.5: Unknown arg '--destination-ports'  
Try `iptables -h' or 'iptables --help' for more information.  
/etc/init.d/firewall: line 48: 53: command not found
```

I have installed a fresh VZ host node on a fresh centos 5.1 base server installation. All my installation was done via yum using the wiki as a guide.

Anyone else found this problem?

Hello,

Quote:
Unknown arg '--destination-ports'

There is only "--destination-port" here
http://wiki.openvz.org/Setting_up_an_iptables_firewall
