Hello,

We have configured the VPS from HyperVM also IPs are added from hypervm only.

But when we try starting network service from vzctl we get following error.

```
-----  
[root@srv ~]# /etc/init.d/network start  
Bringing up loopback interface:          [ OK ]  
Bringing up interface venet0: RTNETLINK answers: File exists  
RTNETLINK answers: File exists  
[ OK ]  
-----
```

Please let us know if there is any solution from which we can fix it.

Thank you

Seems that the venet0 device is already up.
