Ben, please pull from

`git://git.openvz.org/pub/ubuntu-hardy-openvz openvz`

to sync Ubuntu's repo with 2.6.24-ovz005 version.

The main fixes are for

- * crash when /vz is on NFS mount
- * restoration of some /proc/net files inside VE for netstat(1) et al
- * crash when looking up >= 2k bytes long filenames
- * restoration of mmap(, 0, ...) semantics to return -EINVAL.

Bug: 231400

Bug: 230432

Tim,

I guess this is what Alexey meant by his message above. AFAICS he asked you to remove the patch named
debian/binary-custom.d/openvz/patchset/0050-ubuntu-make-mmap-POSIX-conform.patch
as he already has it in his tree.

Nevermind, I'll redo on top of current Ubuntu tree since some more serious
crashes were fixed meanwhile.
