Hello,
I installed OpenVZ according to how to guides on main page of OpenVZ but when I reboot
machine with OpenVZ kernel, get this error.

error 15: File not found...

Capture is attached.

Thank you very much for your helps.

add /boot prefix to /vmlinuz...
will help probably

How can I do it? Can you please tell me step by step?
Sorry no information about kernels and other tools..

Thank you

Read grub menu comments - there is detailed description, how to change boot parameters.
Something like 'e', 'e', edit line, 'b'

When the system is booted off the non-vz kernel, send us the output of:

ls -al /boot

Why do you use so old kernel?
The current problem is certainly not in old version of kernel, but it is stronlgy recommended to update kernel to avoid possible future problems.

Quote:When the system is booted off the non-vz kernel, send us the output of:

ls -al /boot

In addition to this, please, provide also information from /proc/mounts and from
/boot/grub/grub.conf, /boot/grub/menu.lst
