## Subject: kernel error on receiving end during vzmigrate

While doing a vzmigrate --online from one host node to the other I noticed the following error in the `dmesg` output on the receiving end:

CPT ERR: ffff810118042800,148 :file 6492896 flags mismatch 00000802 00008802

The VEID in question is 148 and it seems to be running without issue on the new hardware node.

Could this have something to do with the slightly different kernel versions on the two host nodes?

2.6.18-53.1.6.el5.028stab053.6 -> 2.6.18-53.1.13.el5.028stab053.10

Should I ignore this error, or is it a good idea to restart the offending VE?
