
Subject: Unable to stop VZ

Since everything I've found via search is years old...

I have 2 different VPSs on 2 different hostnodes, both running Ubuntu 7.01. Hostnode is CentOS 5 x86_64.

Both only have 1 process left running, which is init.

I've done the `vzctl stop VEID --fast` on both

I've attached the 2 strace files for them.

Any help would be appreciated. I do not want to reboot the nodes, as that will be problematic for the other customers.

Kernels are:

2.6.18-53.1.6.el5.028stab053.6 #1 SMP Mon Feb 11 20:14:31 MSK 2008 x86_64 x86_64 x86_64
GNU/Linux

and

2.6.18-53.1.4.el5.028stab053.4 #1 SMP Fri Jan 18 12:29:44 MSK 2008 x86_64 x86_64 x86_64
GNU/Linux

Check that you have latest `vzctl` — and upgrade if not.
