
Subject: Does this kernel support cpanel quotas?

we upgraded the kernel and one cpanel vps is not reading quotas.

```
#uname -a  
2.6.9-023stab044.4-enterprise #1 SMP Mon May 28 23:32:20 MSD 2007 i686 i686 i386  
GNU/Linux
```

When we run
/scripts/fixquotas in the cpanel it gives

```
edquota: Can't initialize quota on /dev/simfs: No such process  
No filesystems with quota detected.
```

can anyone suggest.
thanks
