Hi:

I want to install a mandriva 2006 vps. I downloaded the template
(mandriva-2006-i386-minimal.tar.gz) i put it in /vz/template/cache, I installed it

```
vzctl set 101 --ipadd aa.bb.cc.dd --ostemplate mandriva-2006-i386-minimal --hostname  
smtpdd.dominio.com --save
```

, but i recieve this error:

```
Unable to get full oostemplate name for mandriva-2006-i386-minimal
```

```
Creating VE private area (mandriva-2006-i386-minimal)
```

```
Warning: configuration file for distribution mandriva-2006-i386-minimal not found default used
```

```
Performing postcreate actions
```

```
VE private area was created
```

what's a "fulll oostemplate name" what's missing there ??
