Hello!

When i create a new vps with my own template i got many false ownerships. This also happens, when i decompress the .tar.gz without --numeric-owner - but when i decompress it WITH --numeric-owner everything went fine.

Stefan

Have _you_ used --numeric-owner when creating a template tarball? I guess this is the source of the problem.

mhm OK you're right i guess this while creating the tar.gz file - but i think it is also to good to add it at decompressing... cause this makes live easier

This actually would make life harder just because some old versions of tar do not understand --numeric-owner option :-\
