Hello,

I'm trying to mount a filesystem into my VE using this wiki page :

http://wiki.openvz.org/Mounting_filesystems

-> I created my VE, started it, mounted my filesystem (/home/etude on \$VZROOT/root/VEID/home/filesserver)... then vzctl enter veid, but my /home/filesserver is still empty...

Here are my versions :

OS: debian etch
kernel: 2.6.18-ovz-028stab051.1-smp
vzctl: version 3.0.22-1dso1

If someone has a solution... thanks in advance !

seems that in fact we have to wait "a certain time" for the mount to be taken in consideration...

-> closed -.-' sorry.
