
Subject: Few questions about the released updates for openvz

Posted by [omri75](#) on Fri, 21 Oct 2005 17:28:45 GMT

[View Forum Message](#) <> [Reply to Message](#)

Hi all,

im currently runing

a Fedora Core 3 , i saw today there is updates for OpenVZ. this is a production system, should i update? is there any issues with the update? (Beside the fact i need reboot) problems or complications should i expect?

im currently have INSTALLED

```
[root@] [/vz] rpm -qa|grep vz
```

```
vzkernel-smp-2.6.8-022stab038.1
```

```
vzquota-2.7.0-7
```

```
vztempl-fedora-core-4-1.0-5
```

```
vzctl-lib-2.7.0-22
```

```
vzpkg-2.7.0-17
```

```
vztempl-centos-4-1.0-5
```

```
vzctl-2.7.0-22
```

```
vztempl-fedora-core-3-1.0-5
```

```
[root@] [/vz]
```

Should i update?

Thank you very much.

already updated, works great.

but - BEFORE i did the upgrade, my server crashed today

with this log

(all the VPS's, include the Node itself has been shutted down (the node stayd up, but ssh port shutted down etc)

```
Oct 21 22:52:29 vps kernel: OOM killed process 13073 (mm=def66300) exited, free=239529.
```

Looks like some process eat all your memory. This could be due to

- (1) incorrectly configured UBC parameters (use vzmemcheck to find out)
 - (2) some processes running on the Node itself (do not do that, leave the bare minimum such as sshd syslogd etc. say if you want to run web server on the node -- create a separate VPS for it)
-

i dont run anything on the node, and - i use vzsplitt,

i operate it to be, split the system in 5

it is a P4 3000mhz ht 2GB RAM 80GB SATA

how can it be, that suddenly, without any notice ,all VPS's were killed + sshd on the node itself? i was completly "thrown" away from the system.

[View Forum Message](#) <> [Reply to Message](#)

i typed vzmemcheck

LowMem	LowMem	RAM	MemSwap	MemSwap	Alloc	Alloc	Alloc
util	commit	util	util	commit	util	commit	limit
0.97	57.76	1.81	1.44	158.13	6.60	158.13	212.99

whats wrong in this?

omni, this update contained only bugfixes, so it was not obligatory to update it (no security issues). In future I suppose we will provide more info on this somehow as we do in commercial version.

Also, I hope our future commercial versions (not 2.7 yet) will provide hot online kernel updates without reboots.

Omni, can you provide a full kernel log please?

Because before these messages you have to had messages like:

Out of Memory: Killing process ...

Hi dev- thank you, OpenVZ is a great Open source product, the tools are very good for example vzctl, but vzsplint is not calculating correctly, on the first 2 days of my company supplying VPS , we had to shutdown OpenVZ due to the OOM things, and move to VMware.

I Will monitor this Project closely, as soon as it will be with more Docs, howtos , better vzcalc, im not taking it into one server, i will take it for the entire farm in order to have a OpenVZ Based server, since it is really one of the best Virtualization techs i ever saw, - luckily i still got the log, im posting it here.

----- Logs -----

Oct 21 22:52:43 vps kernel: Out of Memory: Killing process 4807 (httpd), flags=140, mm=d7f65800.

omni, have you removed it?

well, closer to the matter, do you still have configs from your VPSs?

I assigned a bug to this

http://bugzilla.openvz.org/show_bug.cgi?id=61

but it won't be an easy task to resolve it without your help...

Omri, you has overcommit in all params. Could you provide us with one of the vzsplit-generated VPS config files and ``cat /proc/user_beancounters`` output?

Hi dev, thanks for your great help, but i didnt have ANY choice but to remove it, this is fully used Production systems with 5 VPs's runing.

I wanted to git rid of vmware, but VMware gsx is very relaible.

all i can tell, is that i did:

`vzsplit -n 5 -f 5`

and created the Virtual Machined with `vzctl --config 5` option.

everything worked great, but suddenly - it even kills SSHD on the Host node!!
