
Subject: [PATCH 04/15] sysfs: Implement __sysfs_get_dentry

Posted by [ebiederm](#) on Fri, 04 Jul 2008 01:09:04 GMT

[View Forum Message](#) <> [Reply to Message](#)

This function is similar but much simpler to sysfs_get_dentry
returns a sysfs dentry if one currently exists.

Subject: [PATCH 05/15] sysfs: Rename Support multiple superblocks
Posted by [ebiederm](#) on Fri, 04 Jul 2008 01:10:05 GMT
[View Forum Message](#) <> [Reply to Message](#)

This patch modifies the sysfs_rename_dir and sysfs_move_dir routines to support multiple sysfs dentry tries rooted in different sysfs superblocks.

Subject: [PATCH 06/15] Introduce sysfs_sd_setattr and fix sysfs_chmod
Posted by [ebiederm](#) on Fri, 04 Jul 2008 01:11:40 GMT
[View Forum Message](#) <> [Reply to Message](#)

Currently sysfs_chmod calls sys_setattr which in turn calls inode_change_ok which checks to see if it is ok for the current user space process to change the attributes. Since sysfs_chmod_file has only kernel mode clients denying them permission if user space is the problem is completely inappropriate.

Therefore factor out sysfs_sd_setattr which does not call inode_change_ok and modify sysfs_chmod_file to call it.

In addition setting victim_sd->s_mode explicitly in sysfs_chmod_file is redundant so remove that as well.

Thanks to Tejun Heo <htejun@gmail.com>, and Daniel Lezcano <dlezcano@fr.ibm.com> for working on this and spotting this case.
