---

Hi All,

I'm using vldump to backup my VEs. After a successful vldump, I am unable to restore from some of the vldump'ed tgz files. I've already tried restoring them on another HN with the same result:

versions:

CentOS release 4.6 (Final)  
vzyum-2.4.0-11  
vzrpm43-4.3.3-7\_nonptl.6  
vldump-1.0-2  
vzctl-3.0.22-1  
vzquota-3.0.11-1  
vzrpm44-4.4.1-22.5  
vzrpm44-python-4.4.1-22.5  
vzrpm43-python-4.3.3-7\_nonptl.6  
vztempl-centos-4-2.0-2  
ovzkernel-smp-2.6.9-023stab046.2  
vzpkg-2.7.0-18  
vzctl-lib-3.0.22-1

vldump:

```
# vldump --compress --suspend 1004

restoring:

```
# vzdump --restore vzdump-1004.tgz 9999  
INFO: extracting archive 'vzdump-1004.tgz'  
tar: Skipping to next header
```

zcat: vzdump-1004.tgz: invalid compressed data--crc error

zcat: vzdump-1004.tgz: invalid compressed data--length error  
tar: Error exit delayed from previous errors  
unable to extract archive at /usr/bin/vzdump line 563.

Would appreciate any pointers.

TIA,  
-eric

Nevermind, we found an obvious solution: don't use --compress with vzdump, because the resulting dumpfiles are not always restorable.

I would check for updates to the tar program, memory issues, hdd issues if i were you.

CRC errors mean that the contents of the archive have been in some way corrupted.

This has nothing to do with the --compress flag of vldump.

I used the tool heavily and i was able to backup and restore VEs on a daily basis without any problems.
