
Subject: vldump sometimes failes --> vanished file

Hi everyone,

There's a question with regard to vldump - current version -, which I need to ask.
I backup my VEs with vldump which often works fine. The problem is that vldump sometimes failes due to vanishing files which leads to an aborted backup. The weird thing is that in most cases vanishing files do not lead to this failure. By the way the vanishing files are caused by some mails in the queue, so its normal that they vanish.

Here's the error-code:

```
rsync error: some files could not be transferred (code 23) at main.c(977) [sender=2.6.9]  
ERROR: creating backup for VPS 210 failed (6.75 minutes): command '/usr/bin/rsync -aH --delete  
/vz/private/210 /root/backup/backups/fawkesvz/tmp12654' failed with exit code 23 at  
/usr/bin/vldump line 290.
```

Does anyone know how to fix that? I need a workaround as I'm backing every up by using cron-jobs regulary.

Greetings

Norman
