Hi

Is it possible to run the process account package inside a container.

I have install psacct using:

yum install psacct

But when I run:

service psacct start

I get the error:

Starting process accounting: accton: Operation not permitted
[FAILED]

I am running kernel 2.6.18-8.1.15.el5.028stab049.1

I have enabled the capability sys_pacct, and this allows psacct to start, but it seems to disable the hosts psacct logging.

Is there a way around this?

Thanks
