Hello,

We are in the process of migrating Viruozzo nodes to OpenVZ nodes.
Is there any alternative tool for VZMC to manage VPSes of all OpenVZ nodes.

Also please let us know a good procedure to migrate VPSes from a Viruozzo node to OpenVZ node.

Regards,
Bob

Can't really help you here. OpenVZ doesn't come with GUI tools -- there are some third-party tools which you can google for.
