Hi guys, Ive already loaded ztdummy and zaptel in the HN, then i compiled asterisk from source on the VE and app\_meetme is created, when i started configuring the dialplan and added meetme conferences to it. When I call an assigned conference number in meetme the logs in asterisk will show: Unable to open pseudo device, I have granted access to /dev/zap to the VE already but getting the same error, i have the /dev/zap entries present in my VE. What could be the problem?

How do i properly give my VE access to the zaptel and ztdummy modules loaded in my HN?

I just followed the guide on the wiki.

Thanks in advance

Try [http://wiki.openvz.org/Asterisk\\_from\\_source](http://wiki.openvz.org/Asterisk_from_source)

I just updated the HN section. See if that works for you.

Another idea might be to use CallWeaver because AFAIK it doesn't need ztdummy and zaptel.

Best,  
Sixtus
