Hello,

We installed csf firewall in main node and we have following error when try to start firewall, how can resolve this issue?

```
[root@m5088 csf]# csf -s  
Error: The VPS iptables rule limit (numiptent) is too low (400/400) - stopping firewall to prevent  
iptables blocking all connections, at line 123
```

Thanks

Hi,

try to increase numiptent value. You can do it with vzctl utility:

```
vzctl set 101 --numiptent NUM --save
```

Hi,

please show /proc/user\_beancounter

Hi,

What you need to /proc/  
I see big data in /proc/

Hi,

I cannot find the VE with (400/400) numiptent.  
Only VE 360 has 200:200 numiptent. Try to increase it.
