```
[root@openvz dump]# pwd
/vz/dump
```

```
drwxr-xr-x  2 root root    4096 Aug 15 10:46 .
drwxr-xr-x  9 root root    4096 Aug 11 16:03 ..
-rw-r--r--  1 root root    461 Aug 15 10:46 vzdump-162.log
-rw-r--r--  1 root root 1667942400 Aug 15 10:32 vzdump-162.tar
-rw-r--r--  1 root root   6752 Aug 15 10:46 vzdump-162.xdelta
```

```
[root@openvz dump]# vzdump --restore /vz/dump/vzdump-162.tar 163
```

VEID	NPROC	STATUS	IP_ADDR	HOSTNAME
162	53	running	10.10.20.162	openvz162.com
163	35	running	10.10.20.163	openvz163.com

As subject how to restore the differential backup vzdump-162.xdelta to VE 163 ??

Hello,

1.

vzdump --restore /vz/dump/vzdump-162.tar 163

What is it "vzdump"?
2.
Could you please describe your problem in more detail?
You have several dump files associated with VE 162, haven't you? Do you want to use dump file from 162 VE to restore VE with another number?
I think you could try to do it but you have to create two things for this purpose:

- private are for 163 VE (the same as 162 had during the vzdump-162.xdelta creation)
cp -a /vz/private/162 /vz/private/163
- config file for VE 163
cp /etc/vz/conf/162.conf /etc/vz/conf/163.conf

vzctl restore 163 --dumpfile /vz/dump/vzdump-162.xdelta

Thank you for your dedication to help, but you do not like the correct way.

VZdump in the introduction to this address can see.

Hi,

yes, my bad. I've never heard about vzdump

But as far as I understand you should do the following:

- we suppose that vzdump-162.xdelta was created as a delta between vzdump-162.tar and newer CT 162 state.

-

cd /vz/dump

xdelta patch vzdump-162.xdelta vzdump-162.tar vzdump-163.tar

vzdump --restore /vz/dump/vzdump-163.tar 163
